

Why Skirting is a MUST

For Manufactured Homes

It prevents animals from getting underneath your home and destroying the floor insulation.

In winter, it prevents cold wind from blowing under your home and freezing the pipes.

It finishes the look of a home, giving it a sense of permanence, less "mobile" and more "home."

There are a variety of skirting materials to choose from, including:

Insulated vinyl with foam backing for cold weather

Simulated brick or stone

More expensive materials such as metal or concrete fiber board.
